Work Experience

Consultant, Stroud International

2023 - Present

- Owned on-site delivery of projects across North America and Europe, leading client teams and direct reports to deliver solutions to high-value challenges such as:
 - Restructured client's improvement portfolio to more than double its original value, including €5M in waste reductions that correspond to 300 tonnes of CO₂e
 - Built a roadmap to scale operations with 2.5x organic revenue growth over 5 years, addressing operational challenges and saving \$1.8M/yr in improved efficiencies
 - Identified \$8.2M of raw material waste within a commercial food packer
 - Pinpointed previously unknown phenomenon in decades-old process causing 10% of waste at a highly regulated medical manufacturing site
- As Global Tech Lead enacted improvements to accounting, cybersecurity, and cloud services, designed and maintained financial dashboards, and developed custom software tools, such as:
 - Created cloud training pipeline (PatchCore) for anomaly detection in industrial settings, enabling improvement teams to target low-frequency downtime events
 - Deployed AI-based research tools (agentic pipeline and RAG interface) to support business development through network mapping, lead selection, and outreach generation
- Proposed and carried out Carbon Accounting scope, using GHG protocol to understand client impact

Optical Engineer, VIAVI Solutions

2021 - 2022

- Designed and carried out test programs, turning experimental results into client outcomes
- Developed internal logistics app (Python/Django/Flask) saving ~5% of internal R&D Engineering time

Faculty Support, Queen's University

2018 - 2023

- Multiple positions: Carbon Neutral Café, Engineering Course Development, Laboratory Technician

Education

Bachelor of Applied Science, Queen's University Faculty of Engineering and Applied Science

2018 - 2023

- B.A.Sc in Engineering Physics - Electrical Specialization, Dean's List
- Co-author: [Design of a Simulator for Testing Satellite Attitude Determination and Control](#)
- Applied Science Class of '68 Scholarship, and Victor Alfred Betts Scholarship recipient

Attitude Determination and Control (ADCS) Manager, Queen's Satellite Engineering Team

2018 - 2023

- Led a team of Engineering students to develop an ADCS payload following the Canadian Satellite Design Challenge, later launching on board the CSA's stratospheric balloon platform

Skills, Awards, Projects

Programming: Python, JavaScript, MATLAB/Simulink, C, HTML, Git, IoT, Claude Code

- Created a [web-app](#) using GCP to share my travel experiences and photography with family and friends – using AI to tag photo contents, search for relevant historical facts, and create captions
- Installed IoT sensors onto my espresso machine (ESP8266 boards) to monitor temp, flow, and pressure in real-time through a network UI (raspberry pi)

Tools: M365, Google Workspace, Power BI, GCP

Languages: English (native); French, Mandarin Chinese, German (intermediate)

Duke of Edinburgh, Gold Recipient

Satellite Operations Certificate, European Space Agency (ESA)
